

## **VaccinationCentres - example .NET Core application**

**Implementation start date:** 01/04/2021 r.

**Implementation end date:** 23/04/2021 r.

This is a sample ASP .NET Core application I wrote for educational purposes.

It has allowed me to learn the following:

- basics of working .NET Core with Entity Framework
  - practical exercise of API implementation
  - creation of middleware and logging to a text file
- user authentication and authorisation (using JWT tokens)
  - basic pagination mechanism for returned results
  - returning and sending static files to the server
- deployment of .NET Core applications to the Azure cloud
